To Whom It May Concern,

BioStats Statistical Services

It is my pleasure to provide this letter of recommendation for **BioStats Statistical Consulting** regarding their exceptional statistical services and support during our recent preparation of Clinical Study Report (CSR) for a prospective, open-label, *ex-vivo*, non-interventional investigational study.

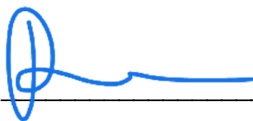

Throughout the lifecycle of this project, Lisa and Frederic demonstrated a high level of technical proficiency, meticulous attention to protocol requirements, and deep expertise in handling multi-layered translational and proteomic datasets.

BioStats successfully designed and executed a robust statistical analysis plan, delivering comprehensive subject data listings and descriptive tabular summaries for continuous and categorical parameters across multiple post-treatment time points.

The clear, actionable presentation of ratios, descriptive statistics, and type III *p*-values provided by BioStats significantly enhanced our ability to interpret the study's findings and draw meaningful conclusions.

Lisa and Frederic acted as a true strategic partner, combining rigorous scientific standards with flexible collaboration. I highly recommend their services to any biopharmaceutical organization or research institution requiring top-tier statistical support for intricate clinical or translational programs.

Sincerely,

INDoors Medical Development Ltd
